

Meeting our client

We meet on 5 April, with our client. Actually we took all needed information from Megi Alimucaj, since we are in house programing, but to be everything clear for every member of the group how works everything in company. Firstly we took with manager of the company, and asked about finance and human resources. For finance they use Financa5 and for human resources they use a computer register to keep notes for every employe. Also, we talked to employes and asked them how is everything managed and what would they like to be changed. The next day on 6 April, we meet with the parents of children and ask them about the application that we are working for. We ask them about their opinion and what would like to be added for parent sector. At the end, we talked with CEO and she showed all the fields that would like to be covered in this application. In this way, everything would be more practical with a desktop and phone application for managing the business.
